Definition

Skin cancer is a disease in which cancer cells grow in the skin. The term "skin cancer" refers to three different conditions. The two most common forms of skin cancer are **Basal Cell Carcinoma** and **Squamous Cell Carcinoma**. Together, these two are also referred to as **Non-melanoma** skin cancer.

Melanoma is generally the most serious form of skin cancer because it tends to spread (metastasize) throughout the body quickly

Basal Cell Carcinoma or Basal Cell Carcinoma Epithelioma

Basal cell carcinoma usually occurs in sun-exposed areas of your body, such as your face, ears or scalp.
Basal cell carcinoma may appear as:

- ✓ A pearly or waxy bump
- ✓ A flat, flesh-colored or brown scar-like lesion

Squamous Cell Carcinoma

Most often, Squamous Cell Carcinoma occurs on sun-exposed areas of your body, such as your face, lips, ears and hands. Squamous cell carcinoma may appear as:

- ✓ A firm, red nodule
- ✓ A flat lesion with a scaly, crusted surface

Basal cell carcinoma

Squamous cell carcinoma

Melanoma

Melanoma can develop anywhere on your body, in otherwise normal skin or in an existing mole that becomes cancerous. Melanoma most often appears on the trunk, head or neck of affected men. In women, this type of cancer most often develops on the lower legs. In both men and women, melanoma can occur on skin that hasn't been exposed to the sun. Melanoma can affect people of any skin tone. In people with darker skin tones, melanoma tends to occur on the palms or soles, or under the fingernails or toenails.

Melanoma signs include:

- ✓ A large brownish spot with darker speckles
- ✓ A mole that changes in color, size or feel or that bleeds
- ✓ A small lesion with an irregular border and portions that appear red, white, blue or blue-black
- ✓ Dark lesions on your palms, soles, fingertips or toes, or on mucous membranes lining your mouth, nose, vagina or anus

Malignant melanoma

Herbal Aid

BLACK DRAWING CANCER POULTICE

This cancer poultice has been used by thousands on all types of cancers with great results.

Poultices of this type have been used for hundreds of years on cancers and have proven very effective. The one Dr Schulze suggests is a very strong general purpose poultice for all types of cancer, including skin cancers and breast tumors.

The tumor may be drawn to the surface or break-up and be passed through the bowels. Dr. Christopher has used this poultice, along with his other programs, to kill tumors of quite frightening size, including the ones with tentacles that came to the surface of the breast.

For more information on killing and removing tumors, you will need to follow the full "Incurable's Program" This material will show members how to cure terminal diseases even when there are only months, weeks, or days to live.

Here is the Formula for the:

Black Drawing Poultice

***Item not included in kit.

Ingredient List

1 cup Red Clover Blossoms
12 lg. Peeled Garlic Cloves***
1/3 cup Dried Pwd Poke Root
2 Tablespoons Goldenseal Root Pwd
2 tablespoons Activated Charcoal
1 Tsp. Tea Tree Oil
1 Cup Bentonite Clay
1 Cup Slippery elm inner bark
Raw Apple Cider Vinegar***
1 oz Blood Root Tincture per 8 oz of liquid

Pre Mixed Kits:
8 oz KIT \$65.00
16 oz KIT \$98.00

Combining Instructions:

In a *Magic Bullet* first pour a 2 oz portion of the *50/50 solution, **be sure the solution is on the bottom of the bullet.**

Then add the amount of Herbal mix needed on top of the liquid. **(Do not put the powder in first or it doesn't work well.)**

The amount of Herbal Mix used will depend on the size of poultice you are making.

Start with smaller amounts.

**50/50 Solution is 50% Distilled Water and 50% Apple Cider Vinegar*

Add more *50/50 solution on top of the Herbal Mix.

For each 8 oz of *50/50 solution add 1 oz of Bloodroot Extract.

Then blend, add more *50/50 solution as needed until it is like a paste.

Add 1/4 teaspoon of Tea Tree Oil to every 8 oz of liquid used.

Add 3 large Garlic Cloves to every 16 oz liquid used.

Blend until smooth, add additional liquid as needed.

***This can be stored in a glass container with a lid and refrigerated for up to one week.**

IS SUNSHINE THE CAUSE OF SKIN CANCER?

By Dr. Christopher

Do not be alarmed by articles in national publications each spring, warning people to avoid sunbathing, saying it is cancer-forming. **The sun cannot cause cancer.** If you do not gradually increase the use of it, but lie in the sun for long lengths of time and burn, certainly it is dangerous for it will cause a severe toxic burn, but **it is not cancer forming.** If cancer is already in the bloodstream and the body, **the sun can ripen it and bring it to the surface,** but that is the only way skin cancer can result from the sun.

Ask any aborigine, Indian or member from any tribal area where only loin cloth, if anything, is worn. There is no cancer, although their bare skin is exposed constantly to the sun the year around. If any of them develop skin cancer, he would have been eating the civilized (?) man's food for a sufficient period of time to get the body into a toxic condition.

Testimonies

Cancerous Mole: Most of the cancer research with chaparral has been done at the Universities of Nevada at Reno and Utah at Salt Lake City. (This does not include our success with hundreds of patients throughout the years). There is a well-known study by Dr. C. R. Smart, Dr. H. H. Hogle and others from the University of Utah College of Medicine Department of Surgery and College of Pharmacy at Salt Lake City. It involves an 85 year old man who had a recurring malignant melanoma (dark, cancerous skin growth) on his right cheek. The growth was associated with satellites of the original melanoma and a large tender mass in the right jaw and neck area. The man had lost much weight and was pale, weak, and lethargic. He had previously undergone three surgeries for removal of the melanoma and each time the mole grew back and increased in size. The fourth time the black mass of tissue measured about 3x4 cm, and the neck mass was about 5x7 cm. Surgery was again advised. The old man refused being repeatedly sacrificed to the same surgical specialist, declined any further treatment and went home. This was in October, 1967. In November of the same year, he began to take 2-3 cups of chaparral tea daily and faithfully on the advice of an Indian friend. By February, 1968, the cancerous growth had shrunk to 2 or 3 mm in diameter while the neck mass was entirely gone. His weight, color and general health had greatly improved.

A few years ago, about 2, I wrote to tell you that I used the black ointment for skin cancer and got perfect results. The Hershey Medical Center doctor wanted to refer me to a Skin Cancer Specialist, but I told him I was going to try the home remedy that an Herbalist Doctor recommended. Needless to say, he was persistent, and wanted me to go to the Specialist, but I was also persistent and told him it was my body and I would try the remedy you recommended, first. Praise the Lord-in 6 weeks it was all cleared up and that was over 2 years ago. My husband is presently using the Black Ointment on his nose for Skin Cancer.

"We have used your Black Ointment with great results--I had skin cancer on my forehead--in six weeks it healed up beautifully." --Hershey, Penn.

Normal Mole	Melanoma	Sign	Characteristic
		Asymmetry	when half of the mole does not match the other half
		Border	when the border (edges) of the mole are ragged or irregular
		Color	when the color of the mole varies throughout
		Diameter	if the mole's diameter is larger than a pencil's eraser
